Sustainable return and recycling system
for automated guided vehicle systems

INTRALOGISTICS | SERVICE

We believe in sustainability and solutions with vision.

At Grenzebach, sustainability already starts with the engineering. This is why we ensure that components are recyclable right from the development stage of our systems.

The Grenzebach return and recycling concept provides for legally compliant and sustainable disposal as well as high-quality recycling. This service offer allows us to guide you as a pioneer in the field of "disposal of automated guided vehicles" throughout the entire product life cycle and also after the service life of your intralogistics system.

We will organize the disposal, dismantling, recycling and proven destruction of your vehicle systems for you.

Benefits:

- » Nationwide return
- » Parts disassembly for remanufacturing
- » Safe, documented disposal with certificate of verification
- » > 90 % material recycling (high environmental factor)
- » Safe battery recycling
- » Safety-relevant components do not reach third parties

The integrated return and recycling system for automated guided vehicle systems – the basis for remanufacturing:

Your service contact is always happy to provide you with further details and advice on the return and recycling system for automated guided vehicles.

- + Increased productivity
- + Extended service life
- + Maximized machine availability
- + Higher profitability
- + Lower total operating costs
